

Amendments to the Claims:

Please amend Claim 1 to read, as follows.

1. **(Currently Amended)** A toner supply container detachably mountable to an image forming apparatus, said toner supply container comprising:

a container body for containing toner, said container body being provided with an opening portion for permitting discharge of the toner therefrom; and

a feeding member, provided in said container body, for feeding the toner in said container body toward said opening portion, ~~the opening~~;

wherein said feeding member includes a rotatable plate-like member extending in a longitudinal direction of said container body, said plate-like member including a projection, extending at an incline ~~being extended inclined~~ relative to a rotational axis thereof ~~and being provided with a projection effective~~ to guide the toner substantially downwardly toward said opening portion with rotation thereof and a through-hole effective to allow the toner on said plate-like member to fall with rotation thereof, thus stirring the toner, thereof.

2. **(Canceled)**

3. **(Canceled)**

4. **(Previously Presented)** A toner supply container according to Claim 1, wherein a plurality of such projections are provided at longitudinally different positions on one side of said plate-like member.

5. **(Canceled)**

6. **(Previously Presented)** A toner supply container according to Claim 1, wherein a plurality of such projections are provided at longitudinally different positions on both sides of said plate-like member.

7. **(Canceled)**

8. **(Canceled)**

9. **(Previously Presented)** A toner supply container according to Claim 6, wherein said projections are provided on both sides of said plate-like member so as to effect toner discharging action twice for one full rotation of said plate-like member.

10. **(Previously Presented)** A toner supply container according to any one of Claims 4, 6, and 9, wherein one of the plurality of projections is substantially close to or contiguous with said opening portion.

11. **(Previously Presented)** A toner supply container according to any one of Claims 4, 6, and 9, wherein said feeding member rotates integrally with said container body.

12. **(Previously Presented)** A toner supply container according to Claim 11, wherein the said container is substantially cylindrical.

Claims 13 through 24. **(Canceled)**

25. **(Previously Presented)** A toner supply container according to Claim 11, wherein said plate-like member is disposed so as to be in contact with or an inside surface of said container body.

26. **(Previously Presented)** A toner supply container according to Claim 11, wherein said plate-like member extends substantially along a length of said container body.

27. **(Previously Presented)** A toner supply container according to Claim 11, wherein said plate-like member diametrically divides an inside of said container body into two substantially equal parts.

28. **(Previously Presented)** A toner supply container according to any one of Claims 4, 6, and 9, wherein a plurality of such projections are provided so as to be partly overlapped with respect to a longitudinal direction of said plate-like member.

29. **(Previously Presented)** A toner supply container according to any one of Claims 4, 6, and 9, wherein a plurality of said projections are provided, and said through-hole is provided between each of adjacent ones of said projections.

30. **(Previously Presented)** A toner supply container according to any one of Claims 4, 6, and 9, further comprising a hollow extension extending from said opening portion, said extension having an opening at a free end thereof to permit discharge of the toner.

Claims 31 through 36. **(Canceled)**

37. **(Previously Presented)** A toner supply container according to Claim 10, wherein said feeding member rotates integrally with said container body.

38. **(Previously Presented)** A toner supply container according to Claim 37, wherein said plate-like member is positioned at a fixed position in said container body.

39. **(Previously Presented)** A toner supply container according to Claim 11, wherein said plate-like member is positioned at a fixed position in said container body.

40. **(Previously Presented)** A toner supply container according to Claim 11, wherein there are provided a plurality of such projections, and said through-hole is provided between each adjacent ones of said projections.--
